

University of Aberdeen Launches a New Tool to Monitor Activities in International Development *(May 2010)*

The Centre for Sustainable International Development at the University of Aberdeen (UK) is hosting a three-day DevInfo database training workshop from 10-12 May 2010. The training aims to equip staff with the requisite skills to use Centre's new database, built using DevInfo technology, to monitor the international development work of the University.

The vision of the Centre for Sustainable International Development (CSID) is to make a significant contribution to the sustainable achievement of the Millennium Development Goals (MDGs) and other international development targets. CSID seeks to accomplish this by raising awareness about sustainable international development amongst University staff and students, providing strategic direction for the work of the University, and maximising existing expertise. Based on these, the Centre actively promotes coordinated and supported knowledge exchange activities, enabling the University to leverage funds to support activities in low and middle income countries. The CSID database is intended to support the Centre's efforts to accomplish these goals and objectives.

DevInfo is a powerful database system for monitoring human development endorsed by the United Nations Development Group (UNDG) to assist countries in monitoring achievement of the Millennium Development Goals (MDGs).
